

Water Bottle Refilling Station Finder

Scenario:

You are a trying to go for a jog but you know that you are going to need to be able to refill your water bottle while running in order to stay hydrated so you need an app that will allow you to see where these stations are around the USC campus.

Task 1: Open the map and see what fountains will be near the locations that you plan on jogging at.

Task 2: Open the favorites menu and delete a station from your favorites that you no longer use as often.

Task 3: Search for a water bottle refilling station in the library and add it to your favorites list.

Things I should fix:

1. The user should be able to click on the location of a fountain on the map and be able to add that to their favorites list without having to go out of the map and specifically search for it.
2. The app should alert the user if the station that they are looking at is out of order, so they know not to plan on going to it

Things I should keep:

1. The ability to search by location and see a list of all the water fountains at that building was well liked
2. The ability to keep favorites and have them in an easy to access menu was another well liked feature that I should keep
